

TILEMAPS

CURS 3 ASSETS

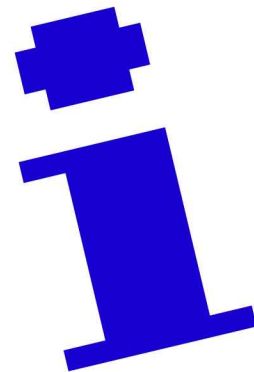

CE SUNT TILESETS?

Tilemaps sunt folosite pentru a construi
nivele sau harti in jocuri.

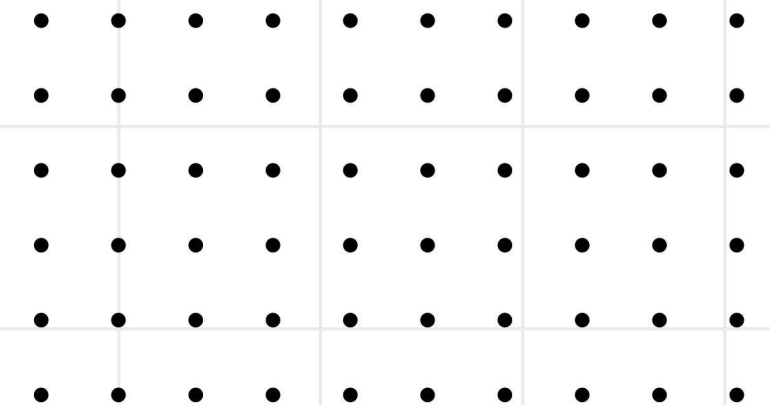

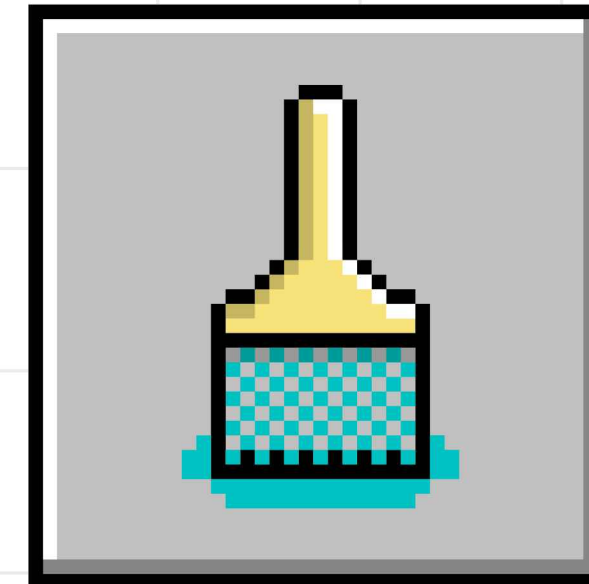

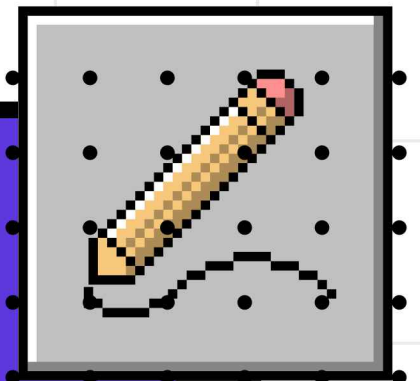

In loc sa desenezi un nivel intreg,
desenezi **bucatile separate** numite **tiles**
cu care dupa il construiesti.

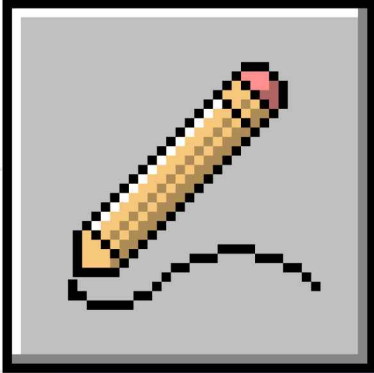

TILESET VS TILEMAP

Tileset = biblioteca de
imagini (tiles/piesețe)

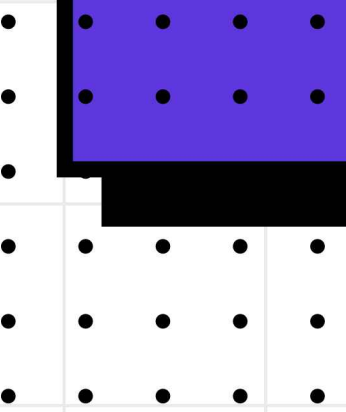

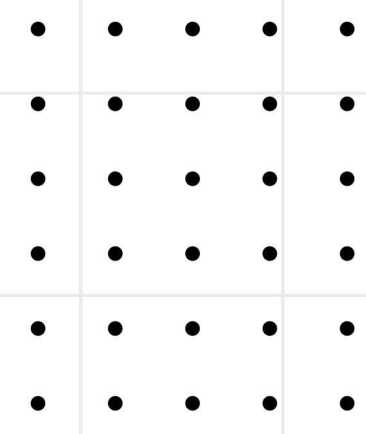

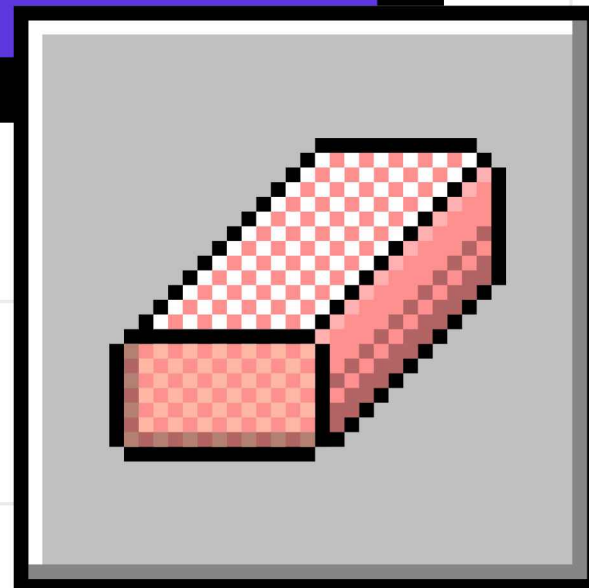

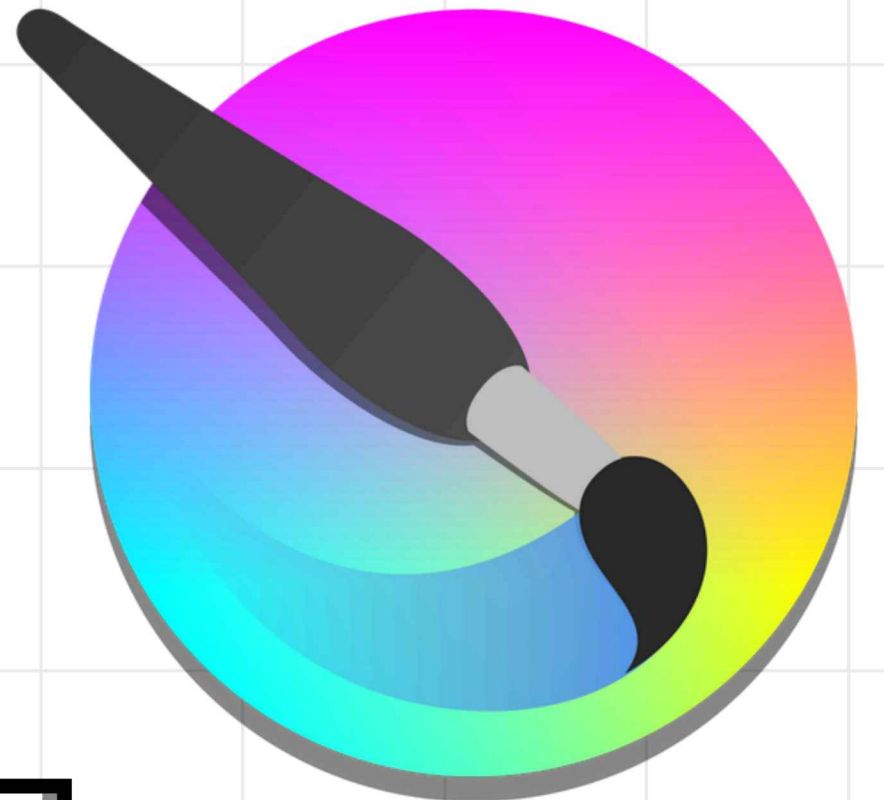

Tilemap = nivelul gata
construit cu tileset

IN CE LUCRAM?

Lucram in **Krita**. **Aseprite** si **Pixelorama** sunt mai mult decat destul in acest caz, dar **Libresprite** este putin cam **simplu** pentru a construi tilesets.

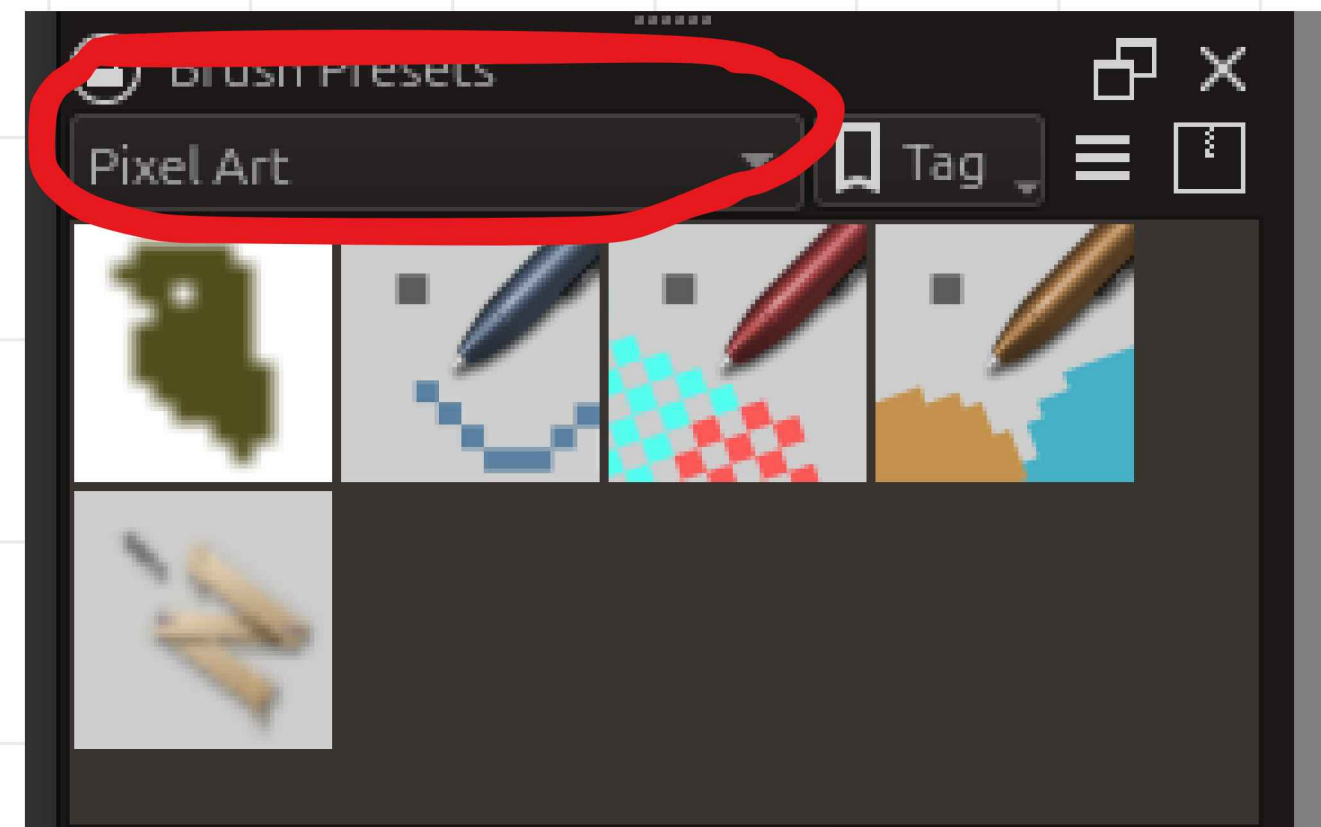

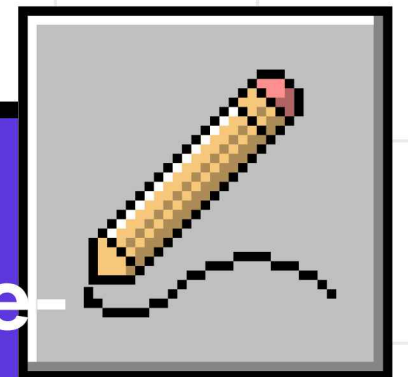

KRITA #1

Schimbati **workspace**: Window →
Workspace → Pixel

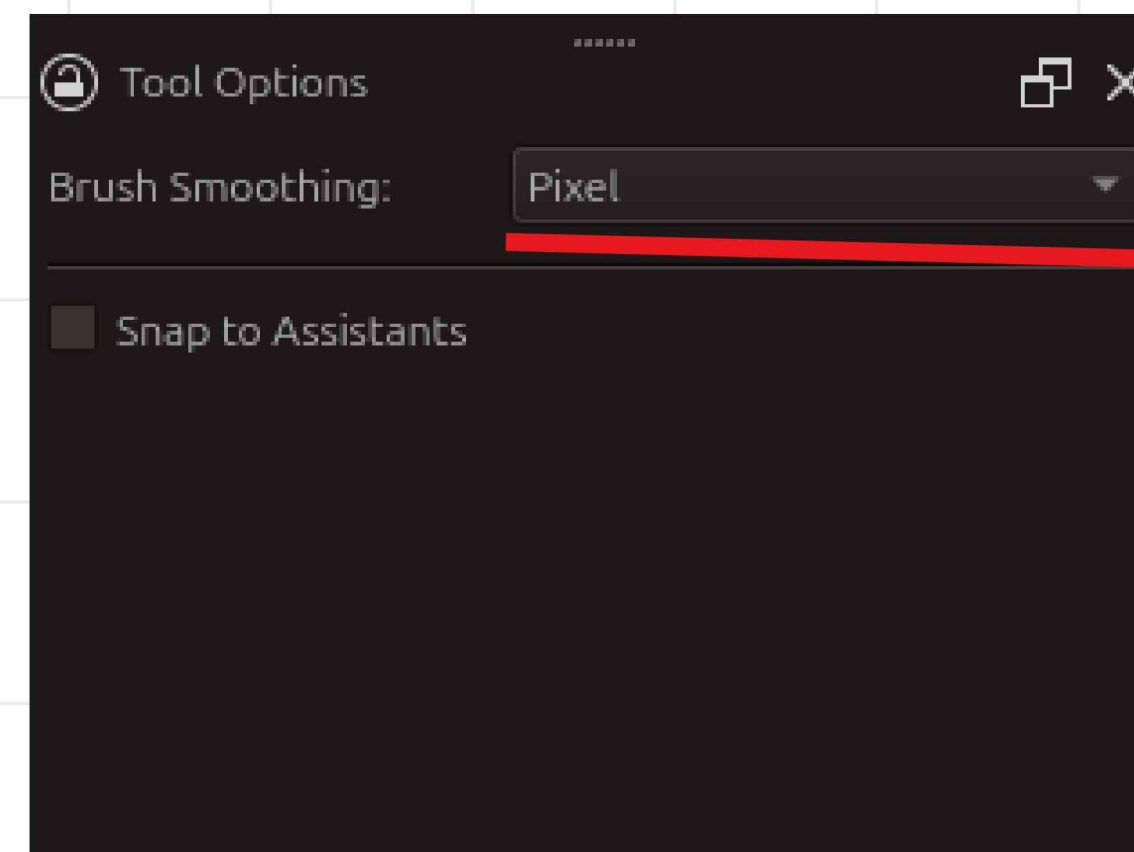

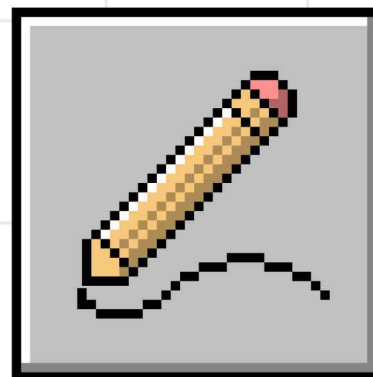

Schimbati setul de brushes in
Pixel Art

Asigurati-va ca aveti **workspace-
ul de Pixel** (trimis pe Discord pe
resurse arta) importat in Krita +
cele **2 custom brushes**.

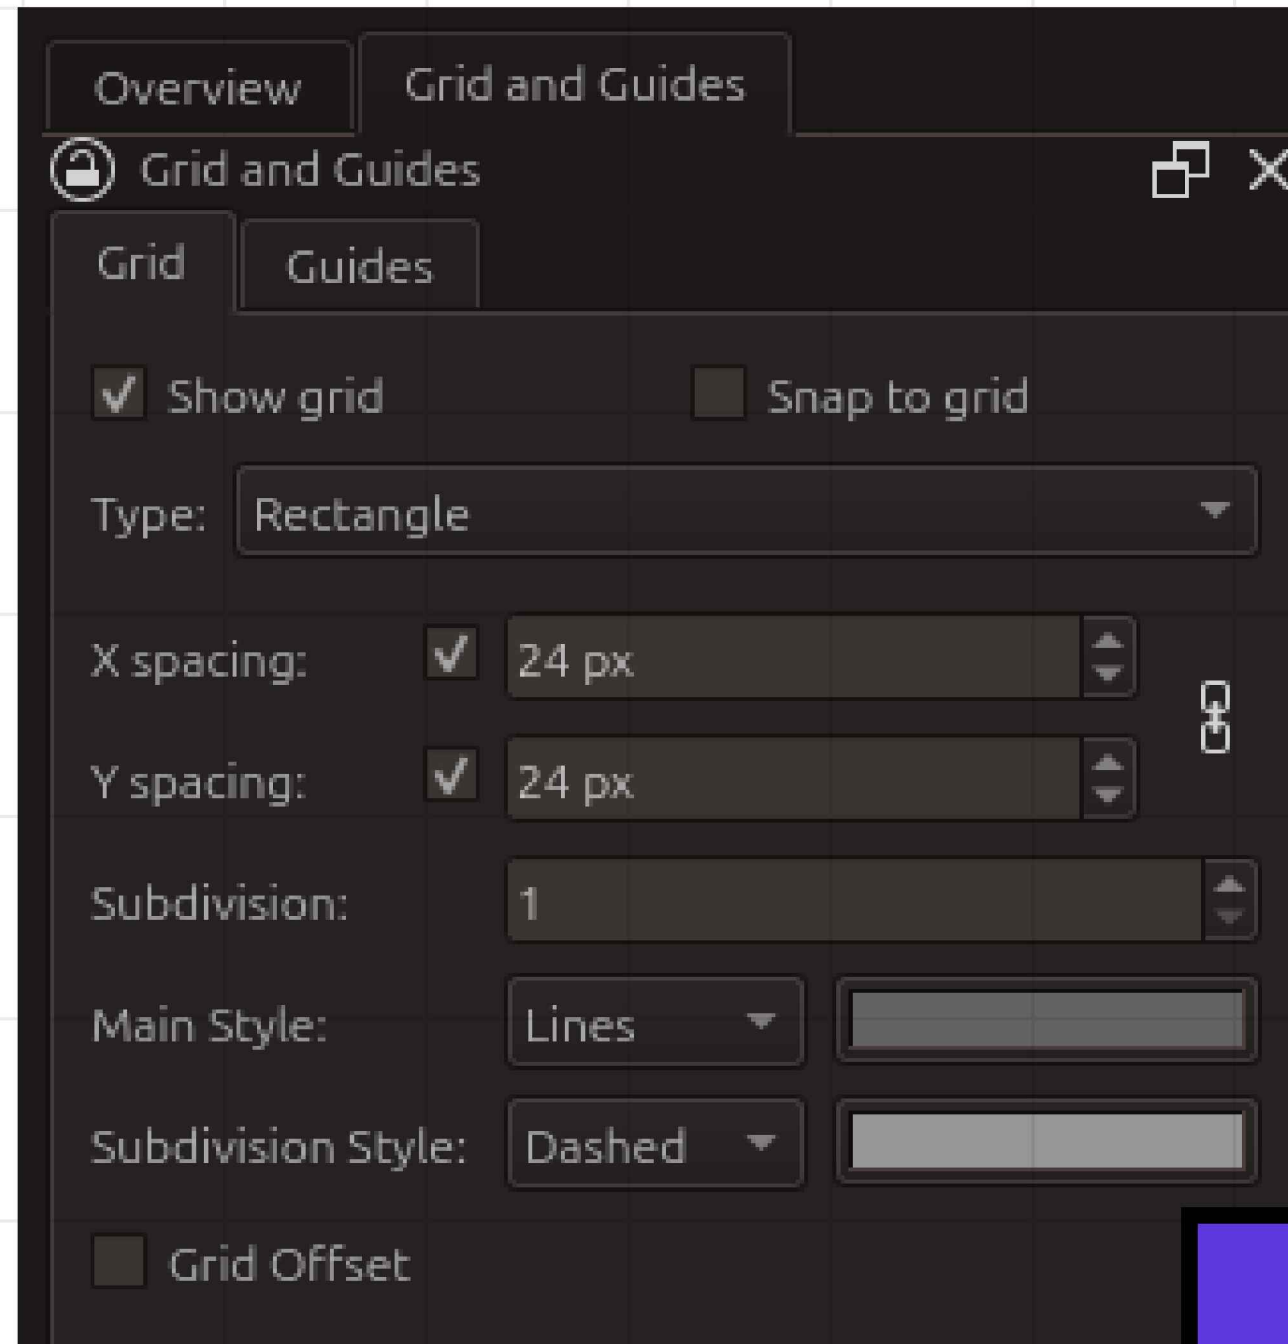

KRITA #2

Brush smoothing → Pixel

KRITA #3

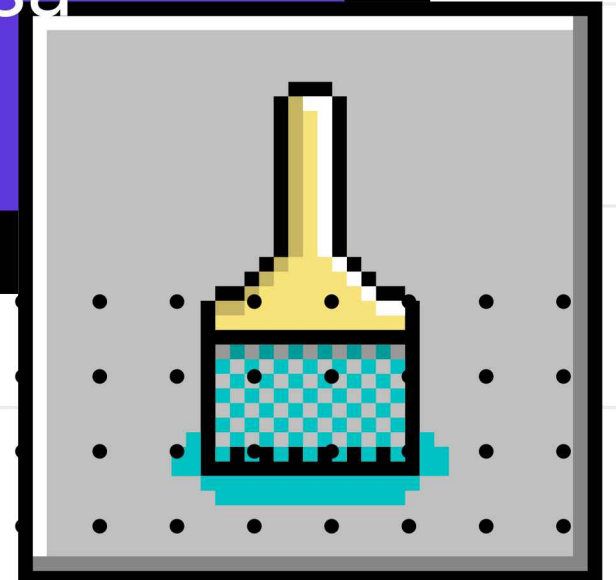

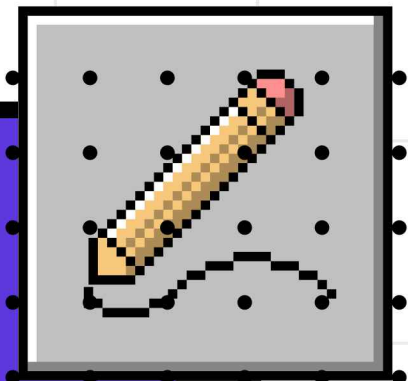

Alegeti marimea unui 'tile' bazat pe marimea personajului vostru principal desenat. (Important: consistenta, pentru ca nu rotim/marim/micsoram etc. nimic in pixel art!)

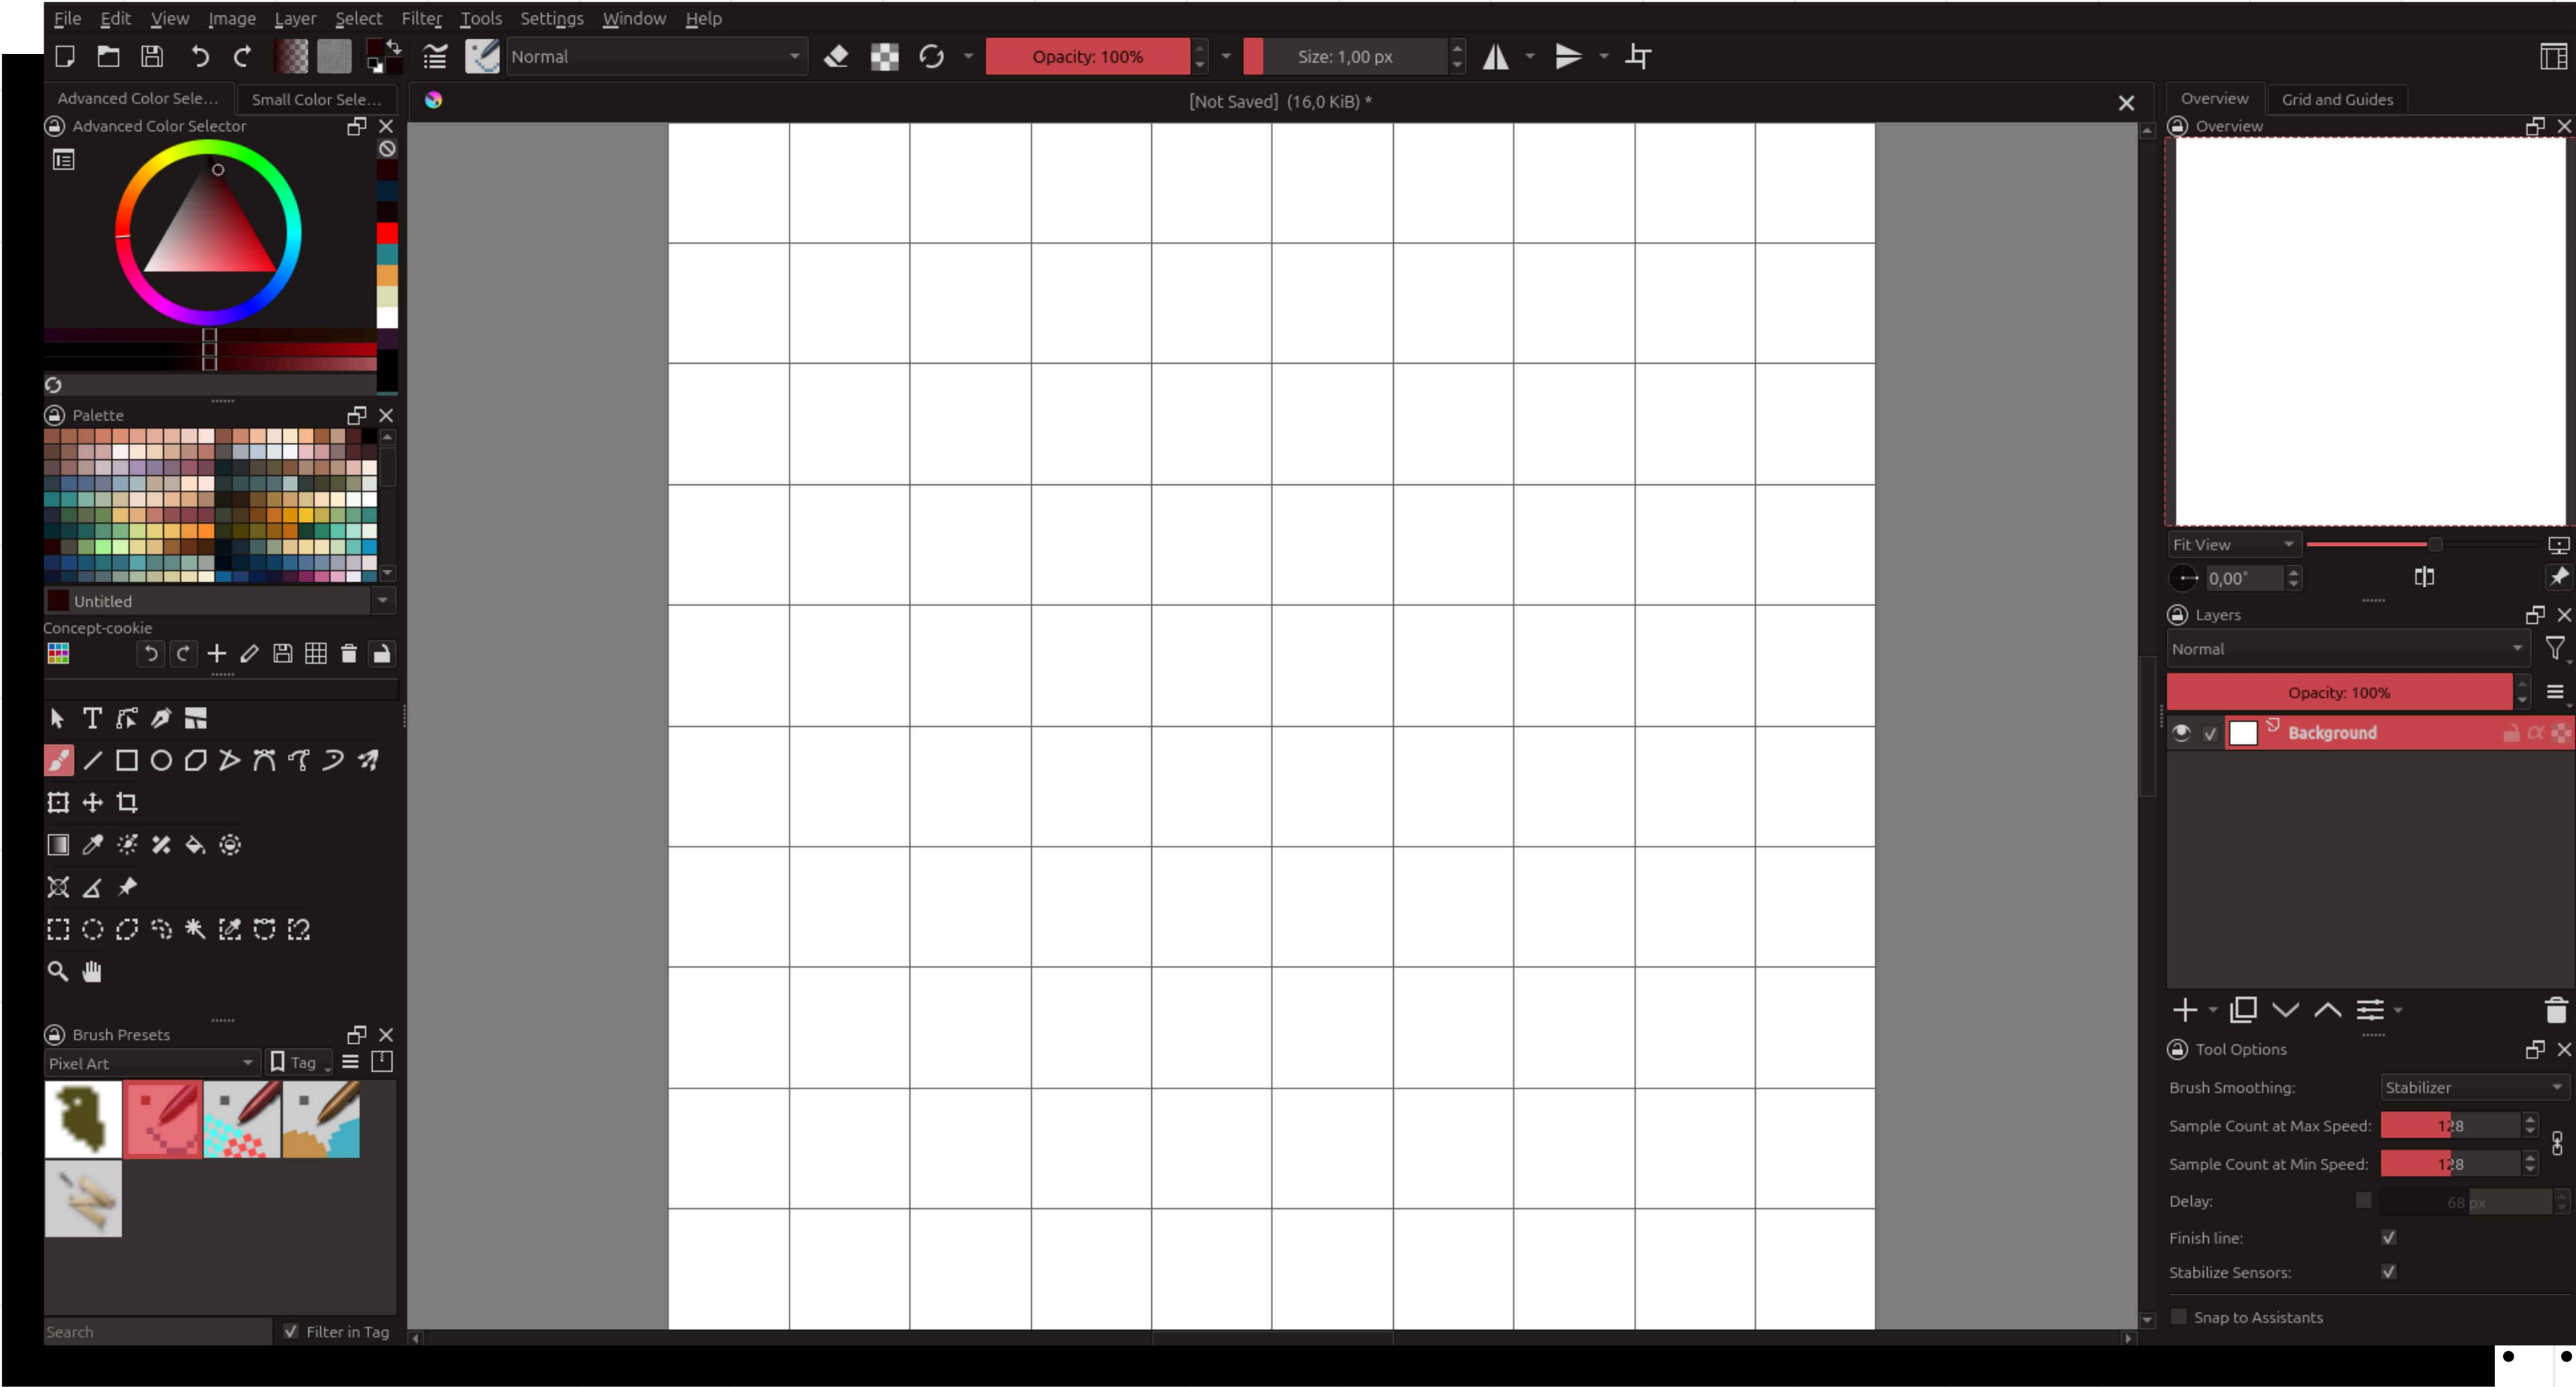

Sa zicem ca avem 10x10 tiles (100 in total), fiecare de 24x24px → New File: Width (240px) Height (240px)

Avem nevoie de un 'grilaj' (grid) sa delimitam fiecare tile.

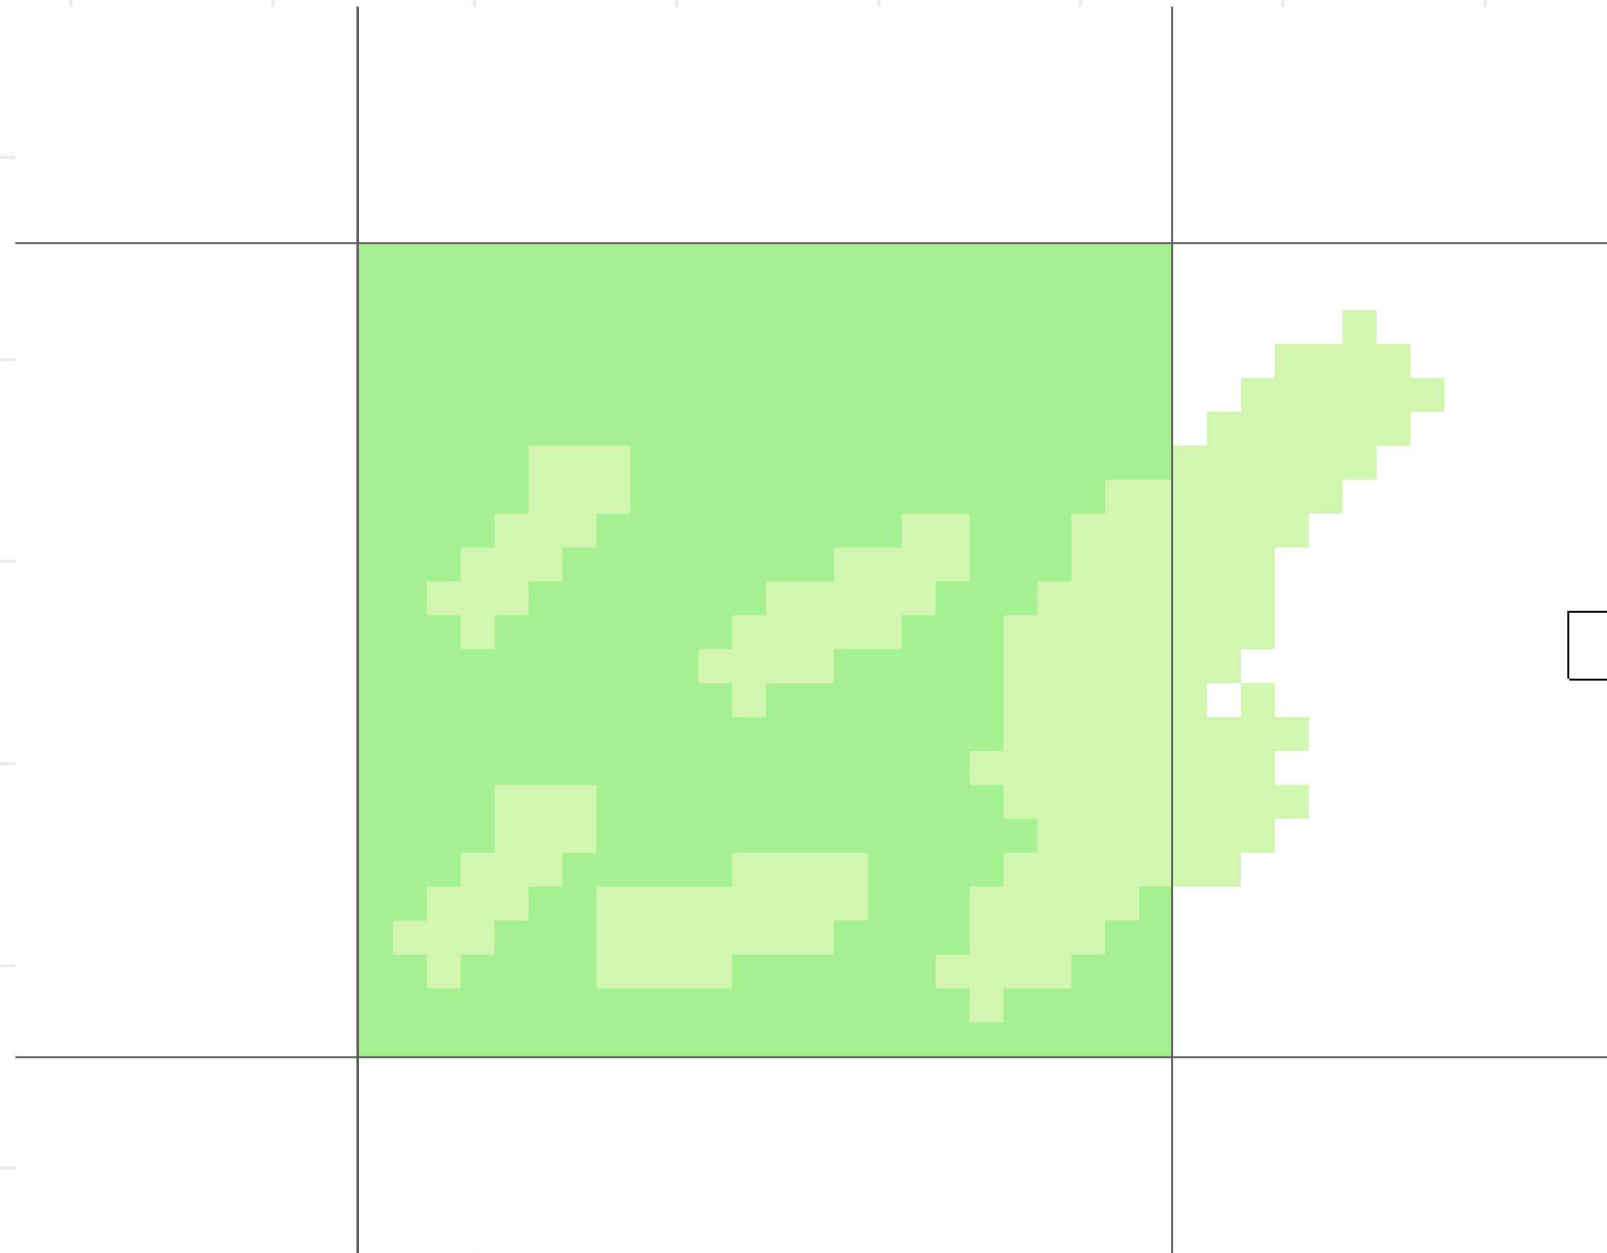

Dreapta sus → Grids and guides

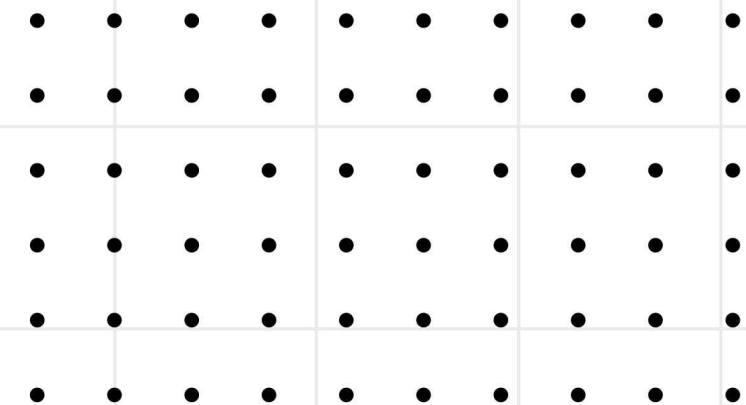

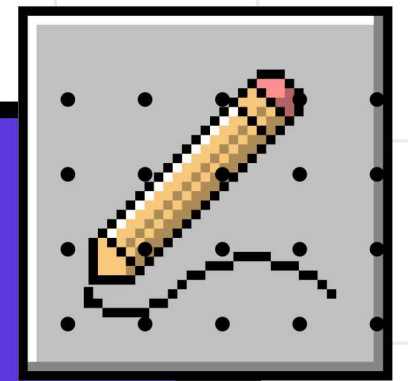

KRITA #4

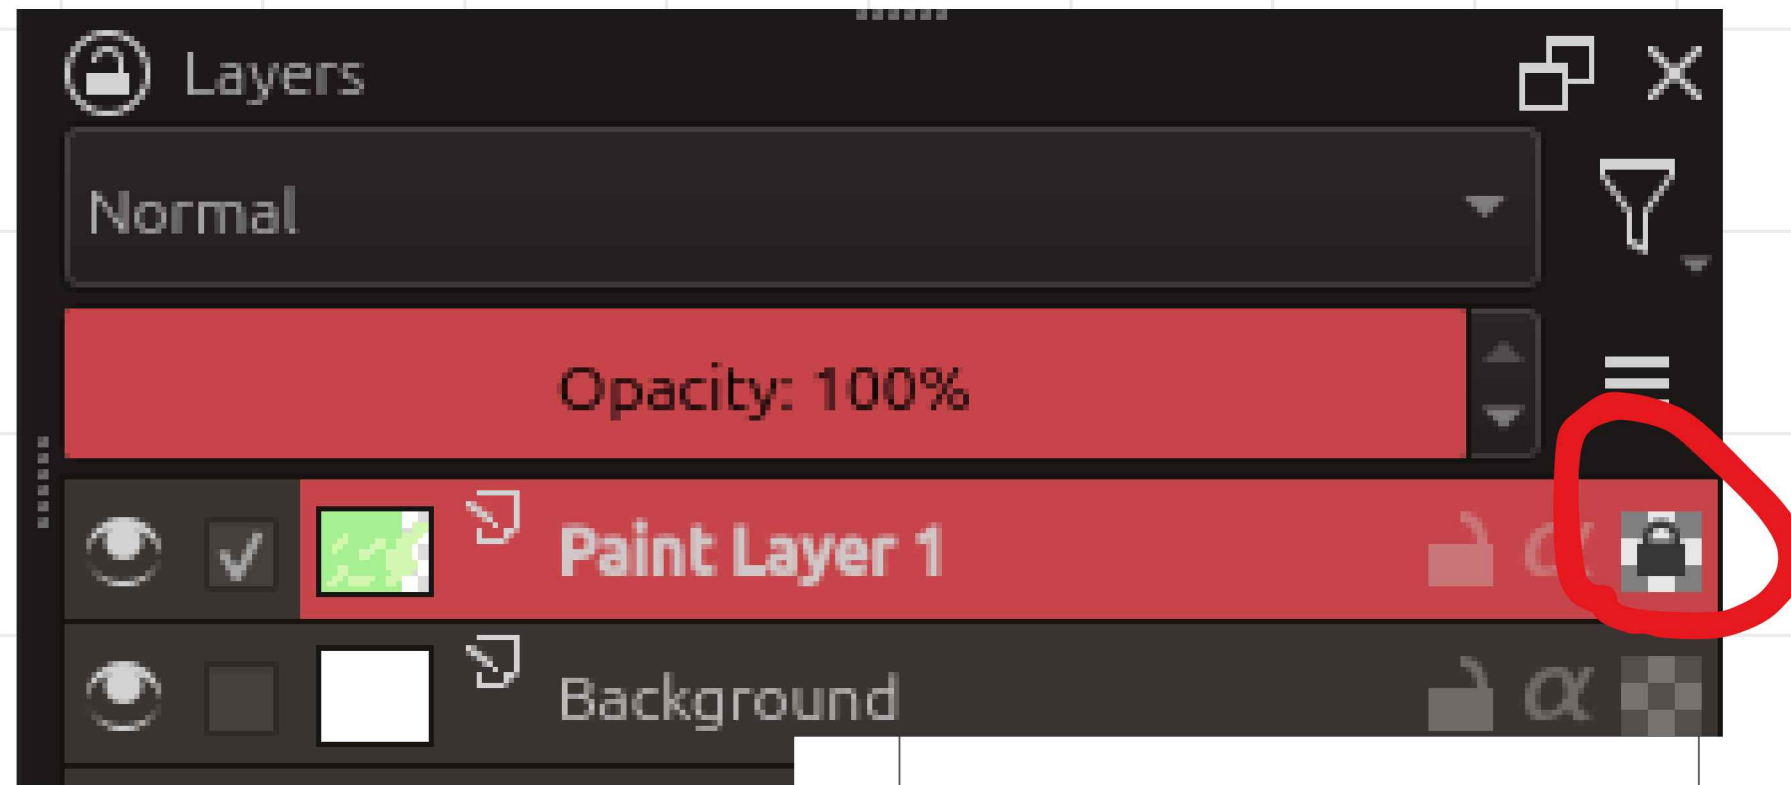

KRITA #5

Am facut un patrat pentru
iarba, dar acum vreau sa
desenez doar pe el, cum
fac asta?

KRITA #6

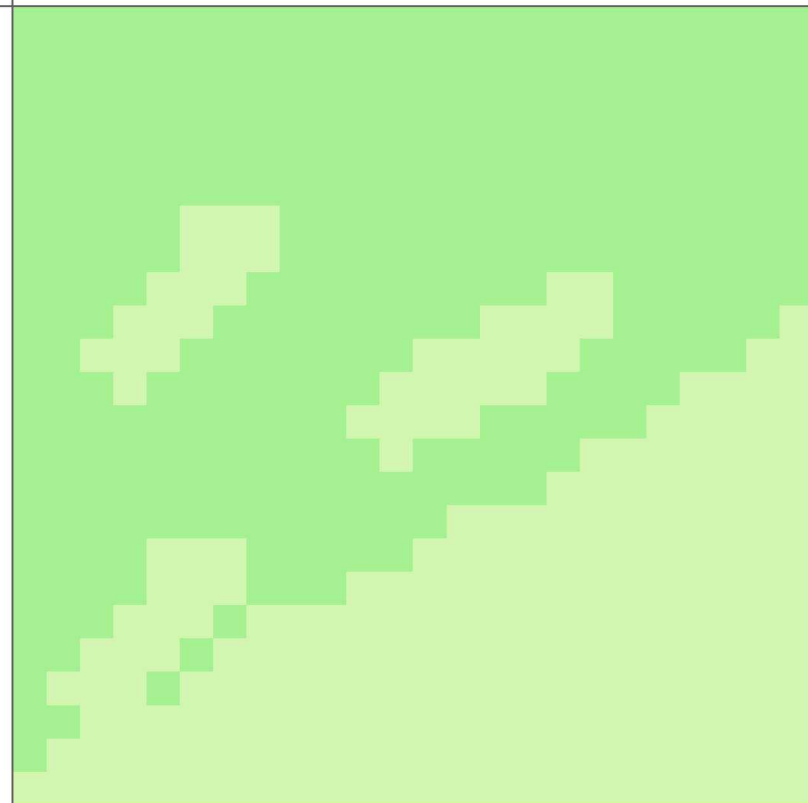

La layer, aveti ceva numit
"Alpha lock"

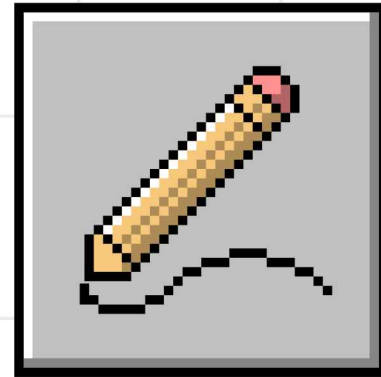

Alpha lock inseamna ca poti
modifica doar pixelii deja existenti
pe acel layer

Daca il bifati, puteti sa desenati doar
in patratul desenat

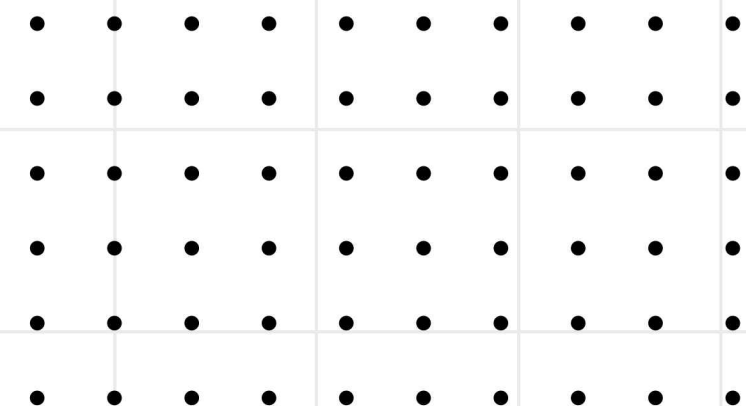

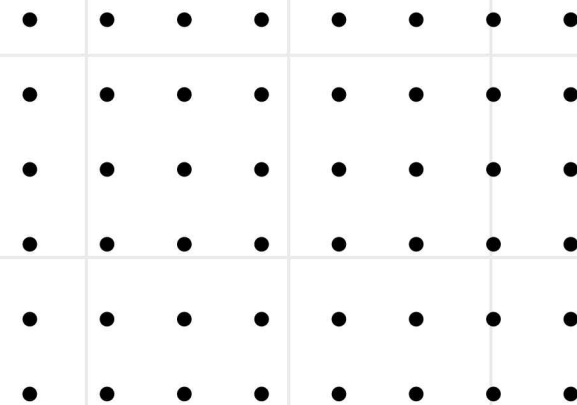

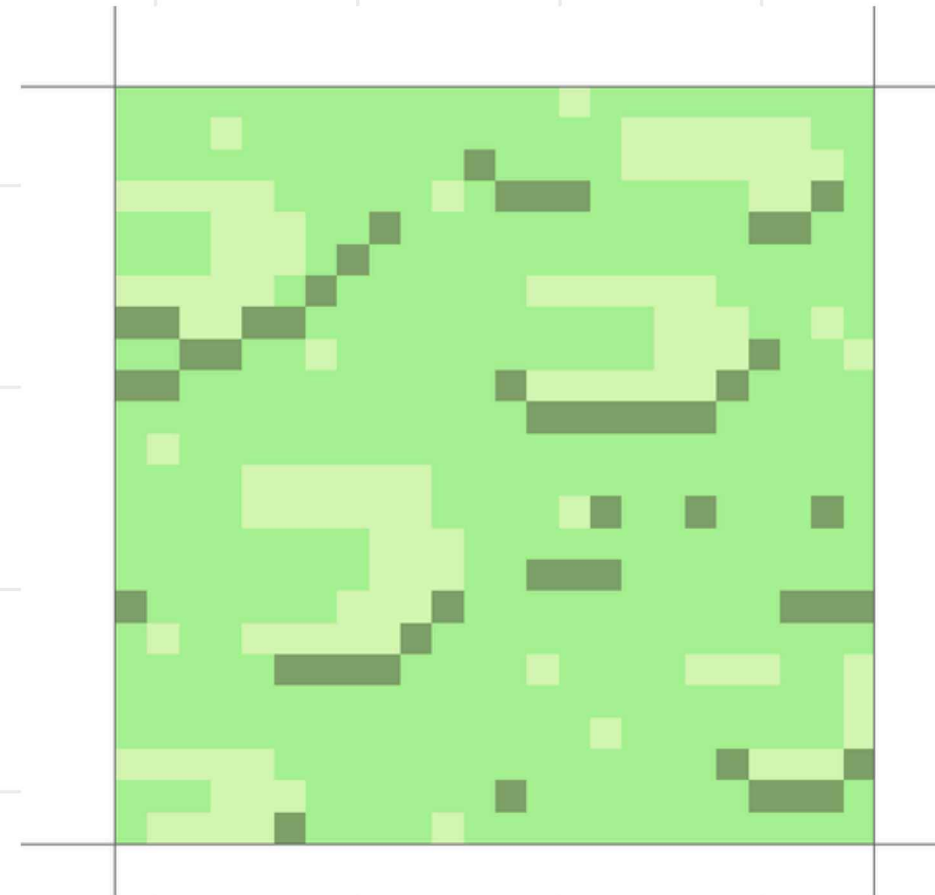

KRITA #7

Sa zicem ca am desenat deja
primul tile

Cum stiu ca se potriveste perfect
intre alte tiles de acelasi fel cand
fac harta?

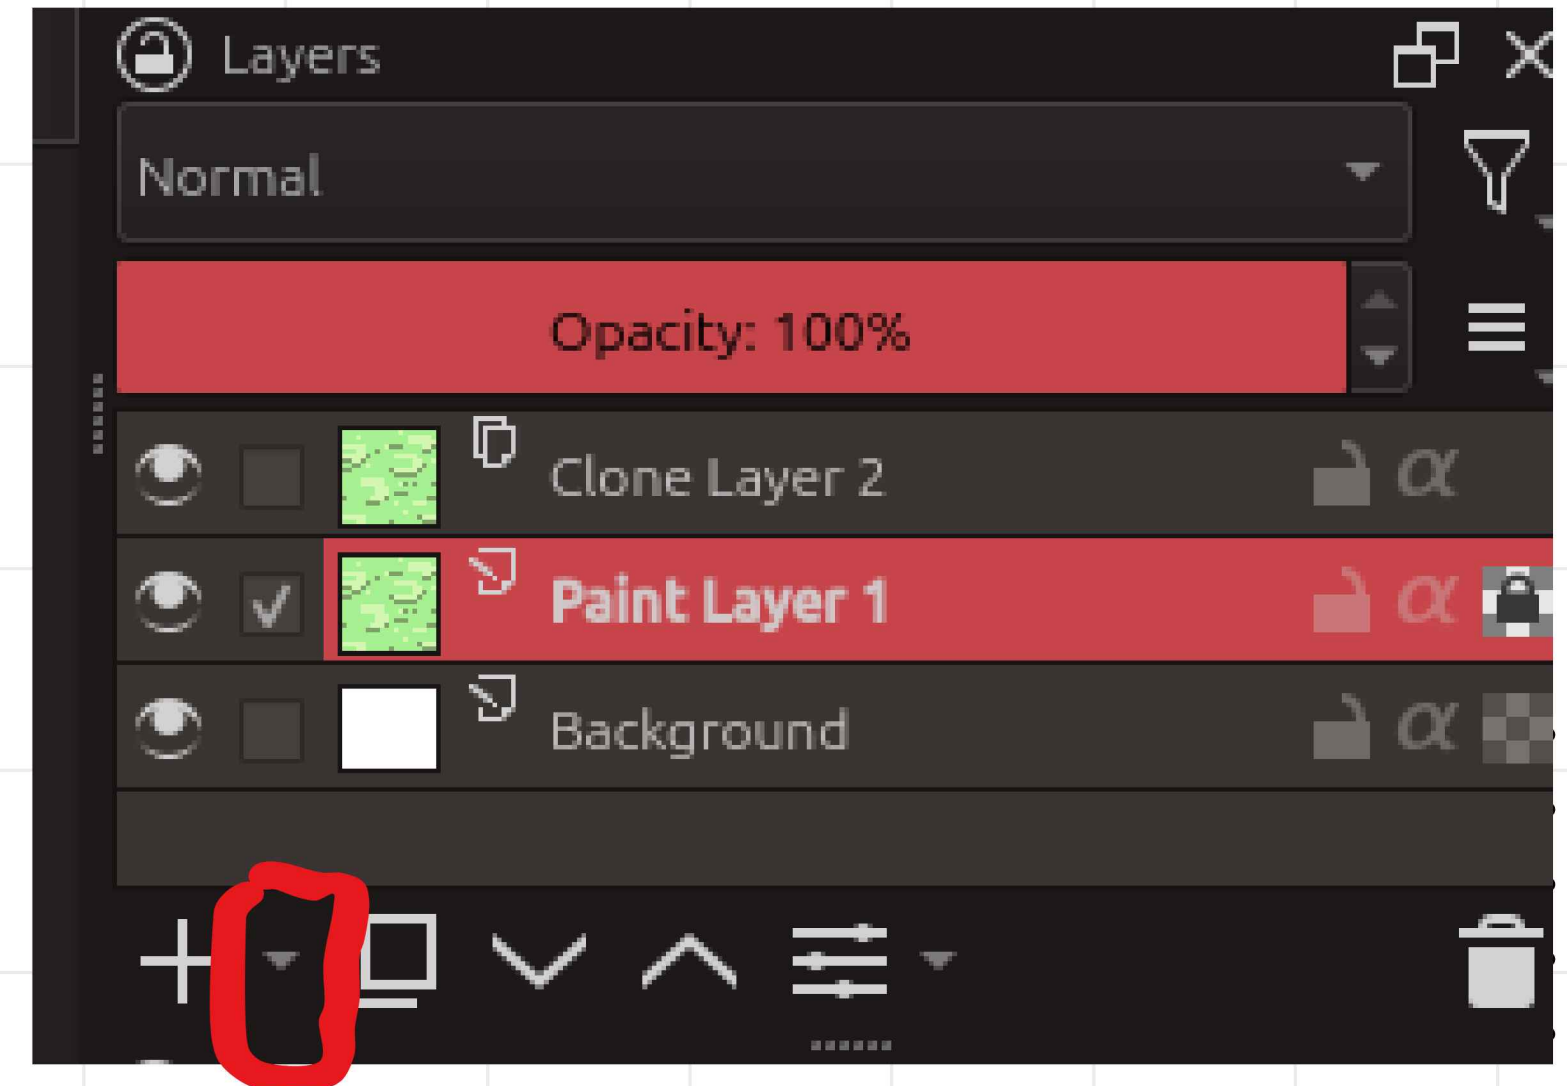

KRITA #8

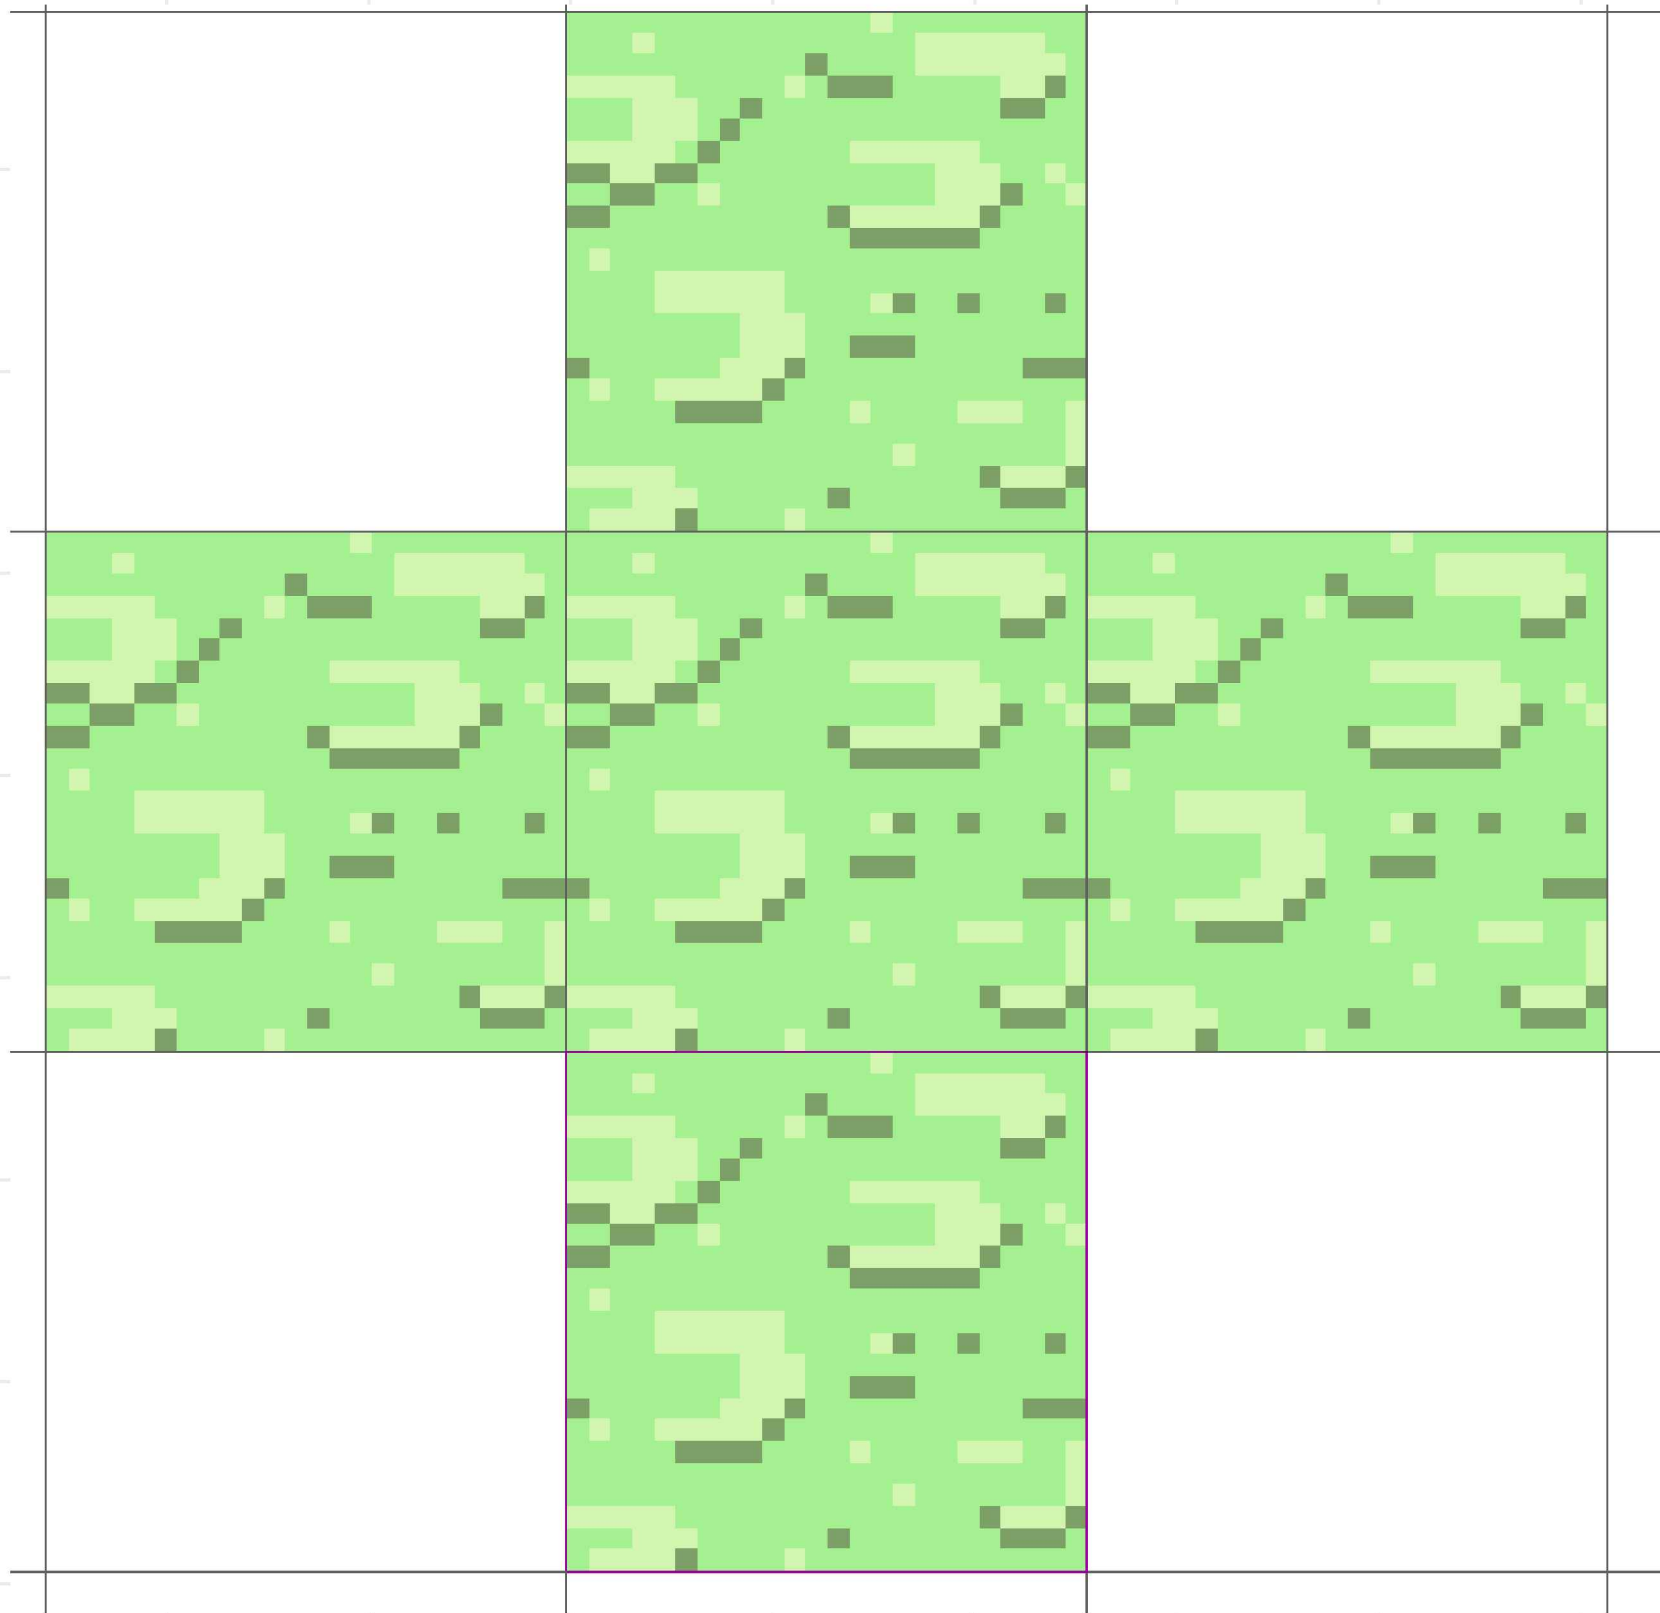

Pentru asta avem ceva numit
"Clone Layer"

Sageata in jos de langa '+' → new
clone layer

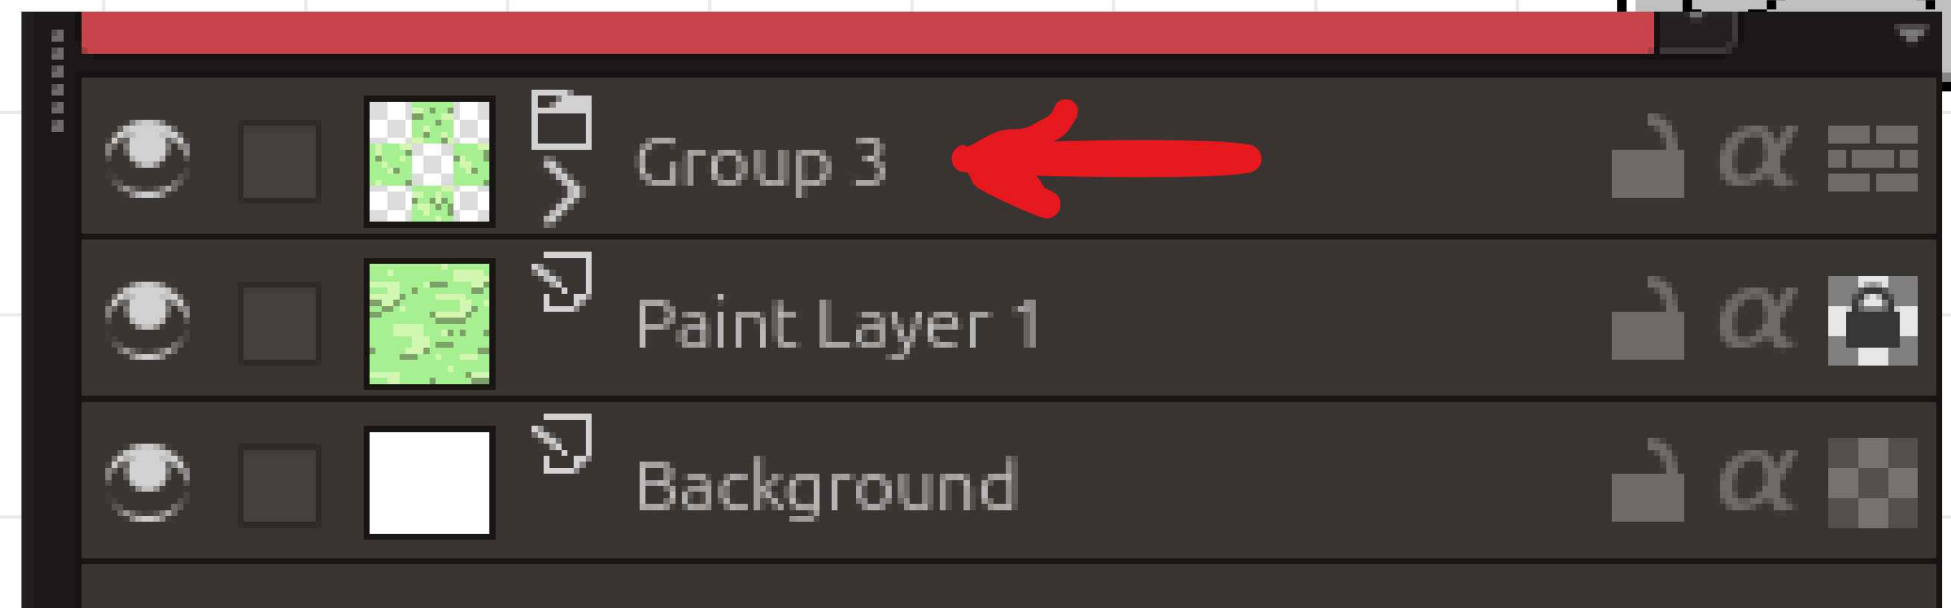

Cu clone layer selectat, daca
apasati 'T', puteti sa il mutati
Faceti 4 clone layers

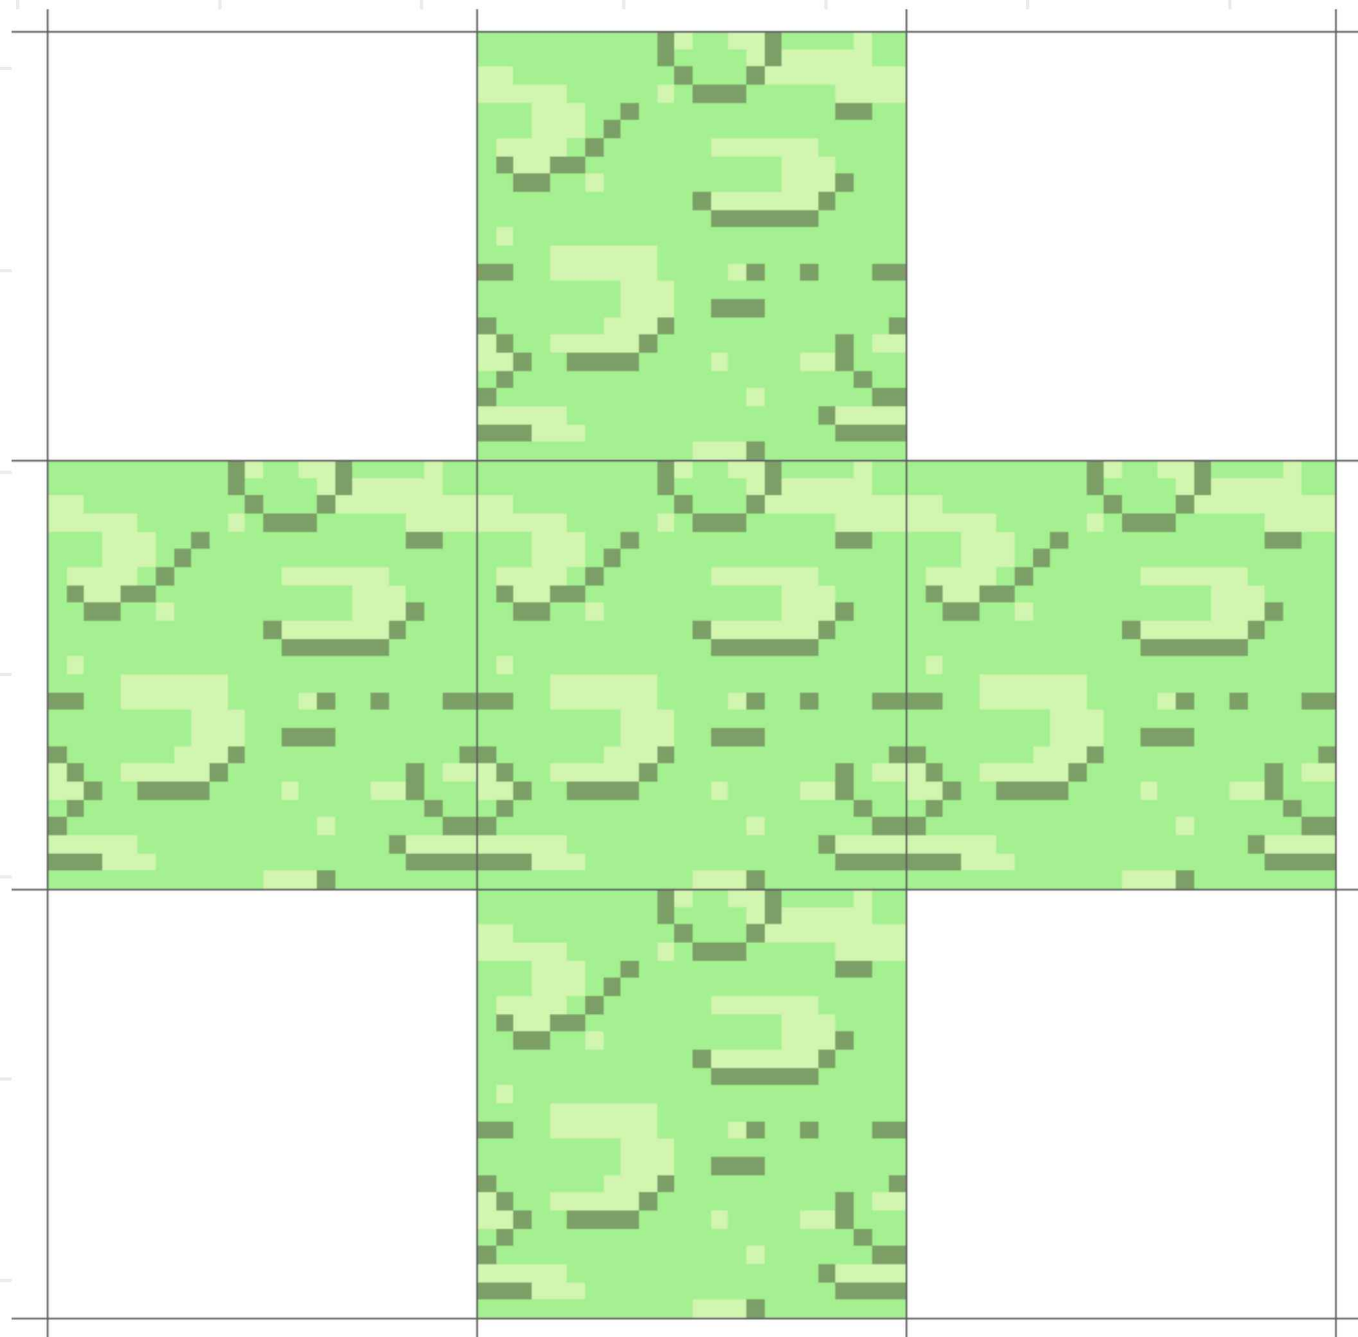

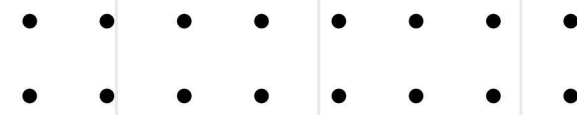

KRITA #9

Selectati cele 4 clone layers →
Group → Quick Group (si ii dati
collapse/ il inchideti, asa scapati de
prea multe layers care sa va incurce)

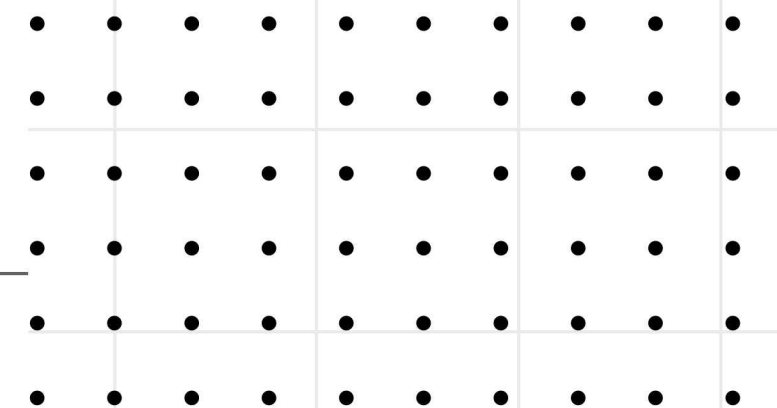

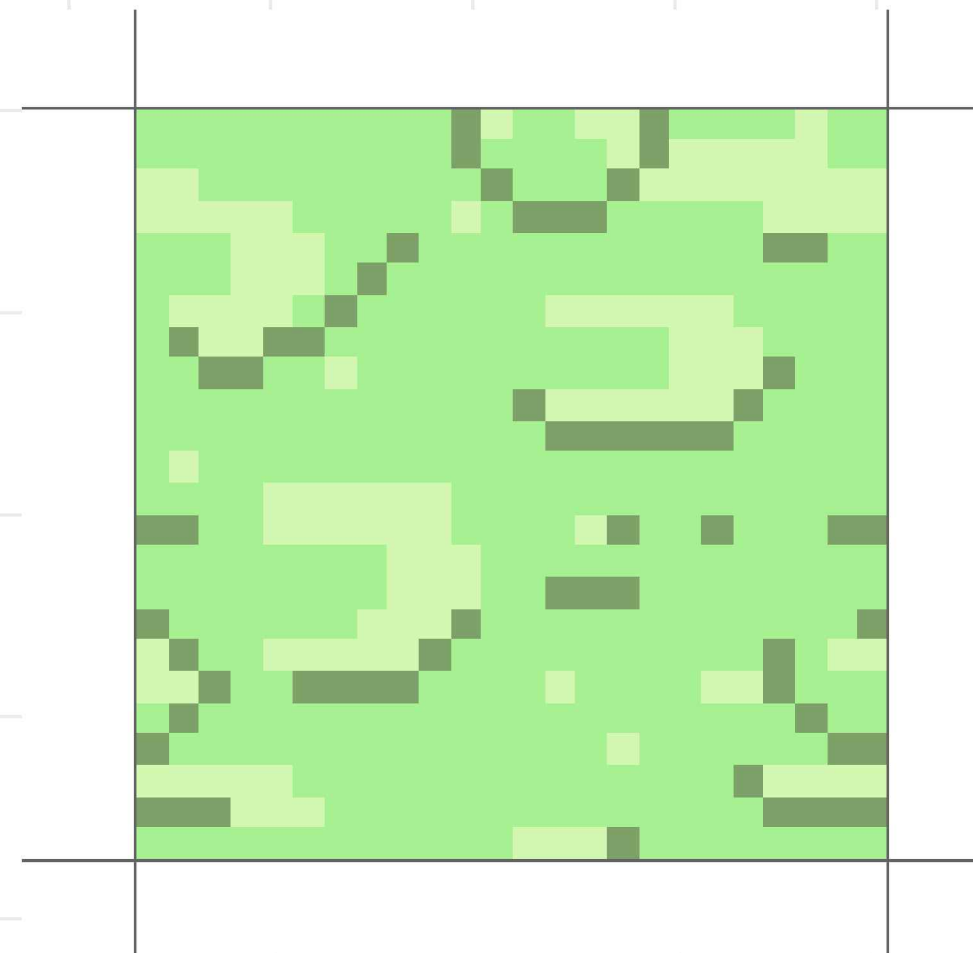

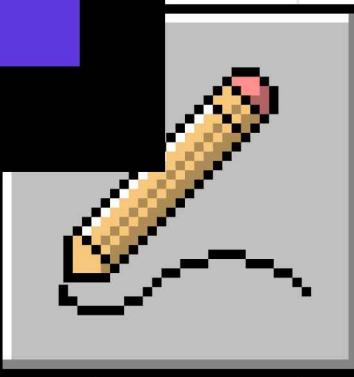

KRITA #10

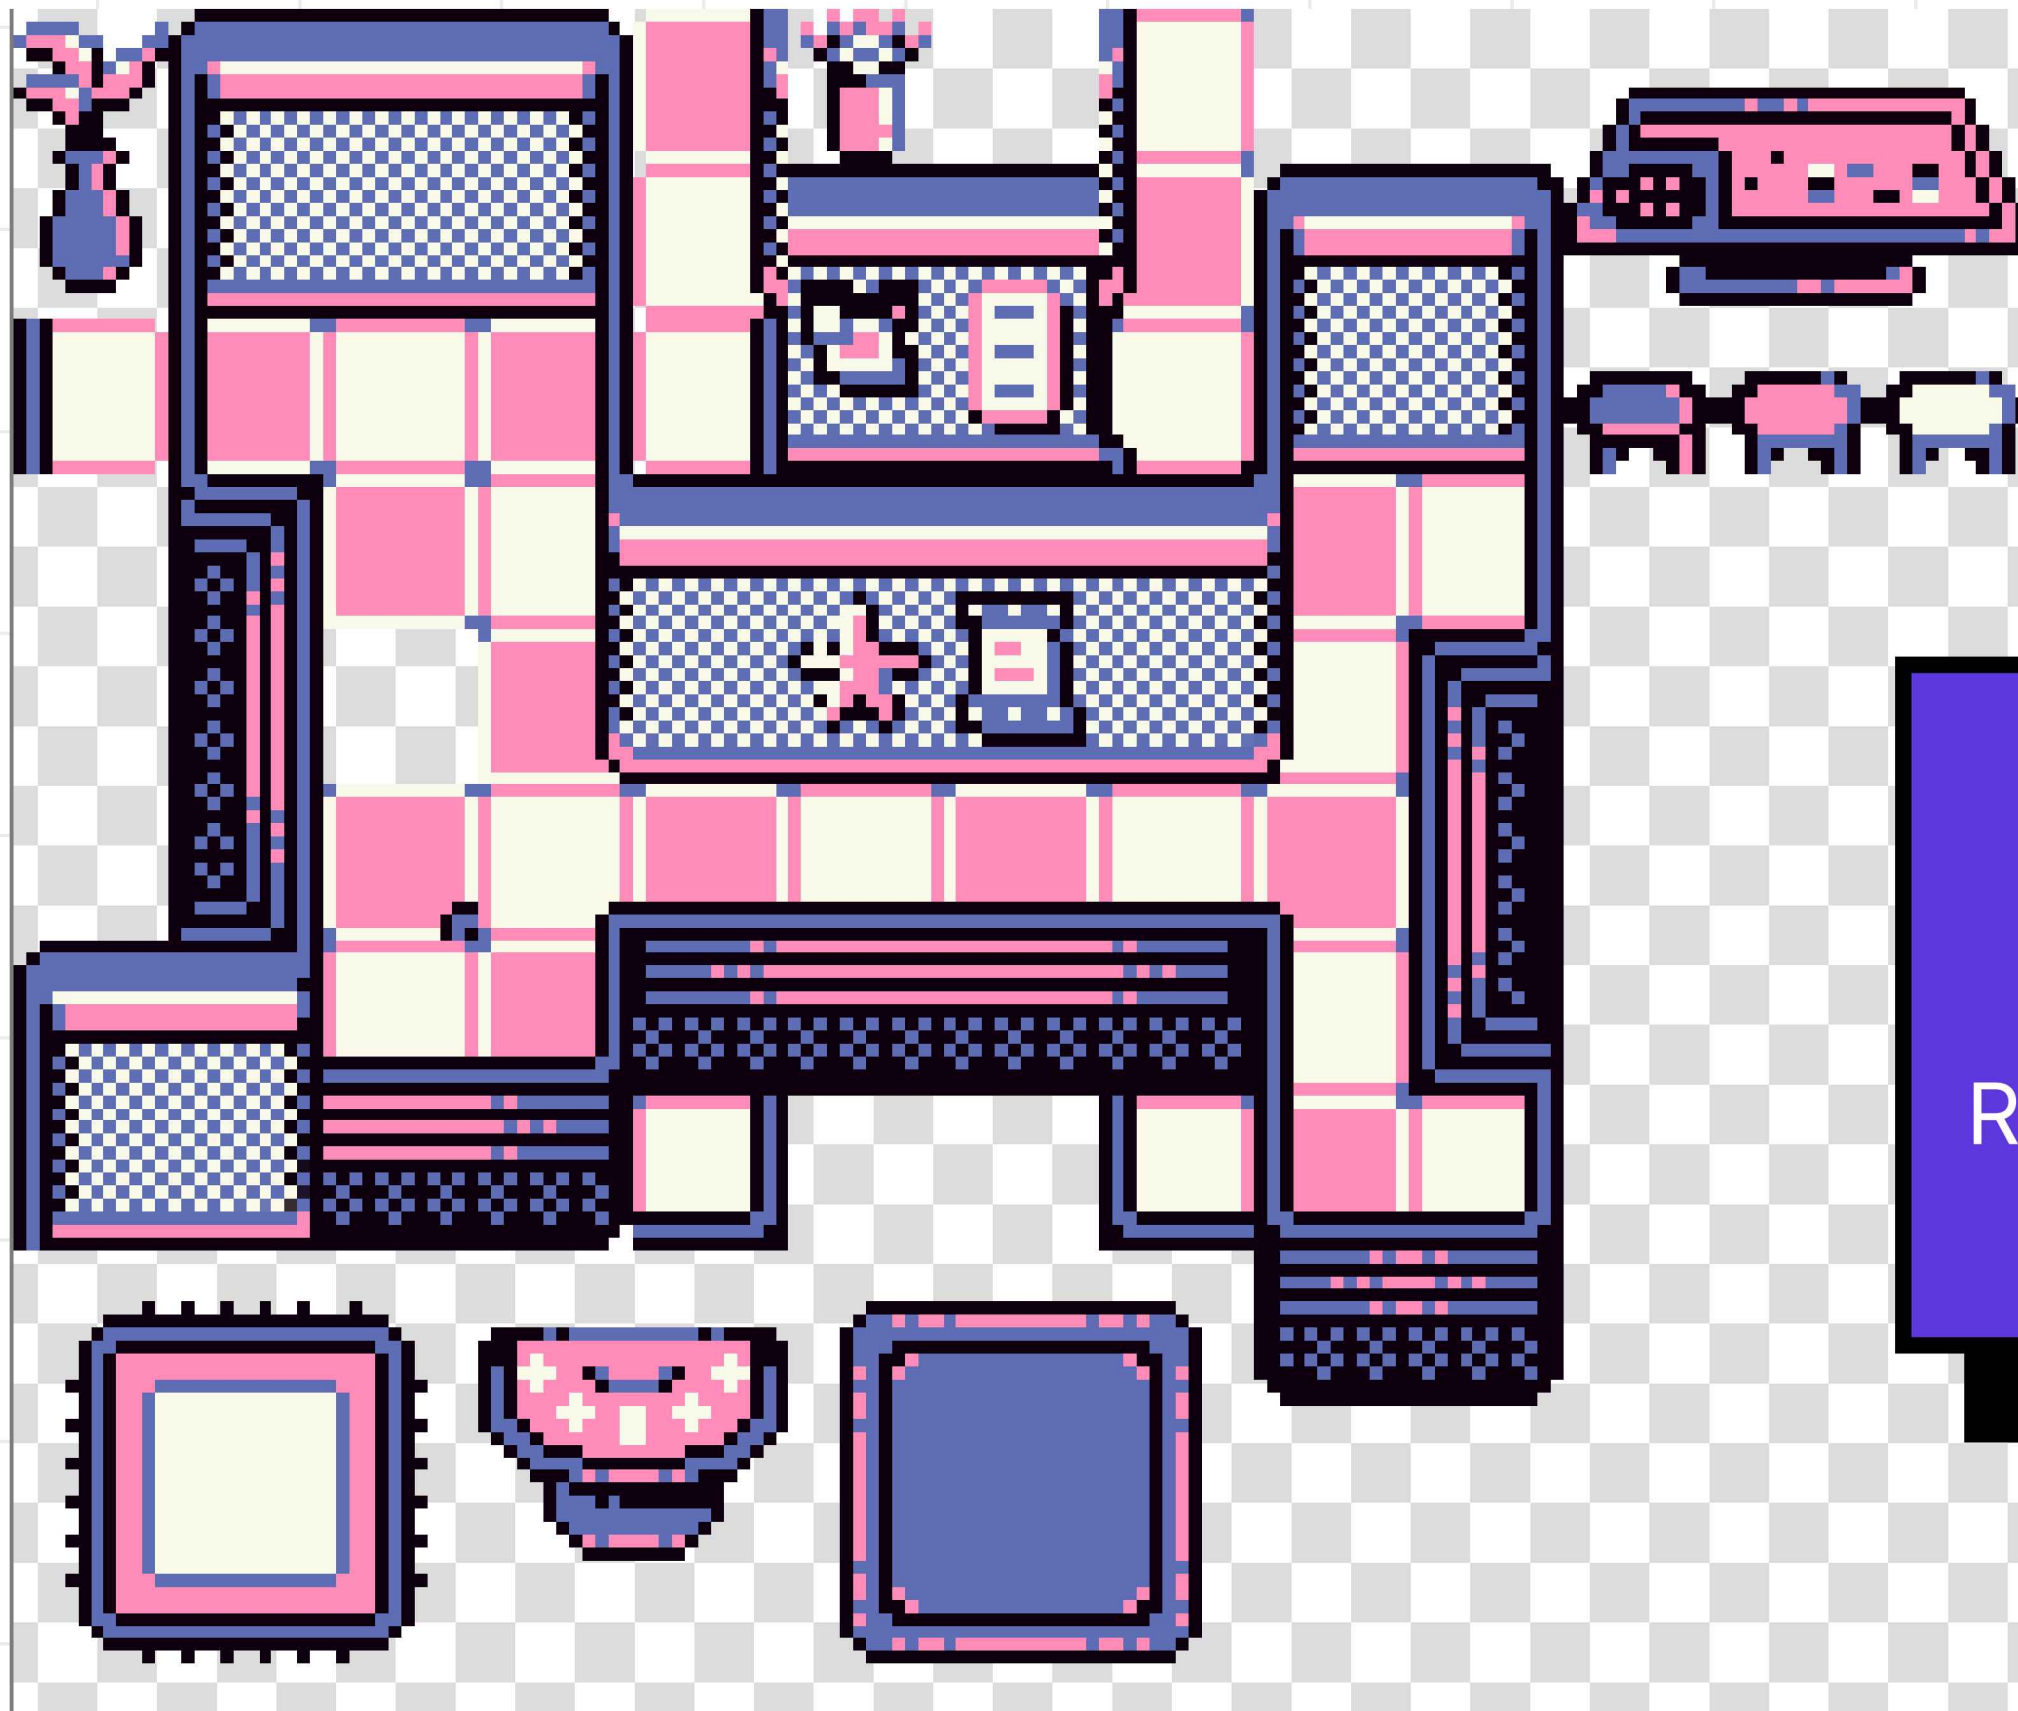

Acum, daca desenati pe patratul
vostru de iarba, se schima si celelalte
din jurul lui.

Asa puteti sa il potriviti perfect.

KRITA #11

Primul meu tileset
(tile:12x12px):

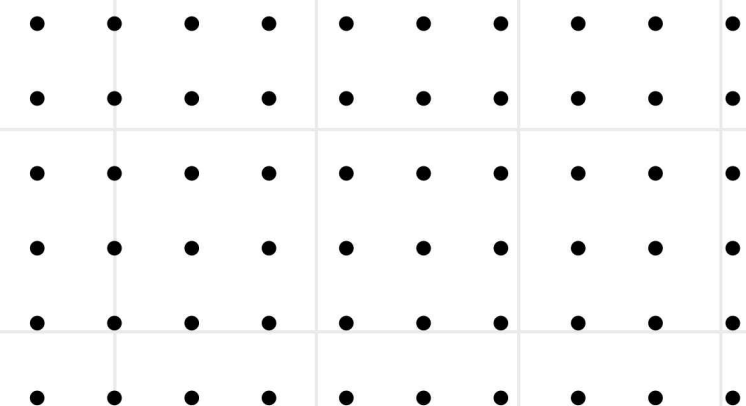

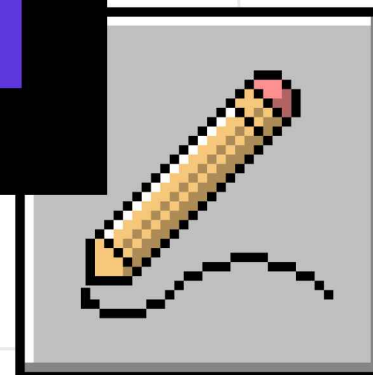

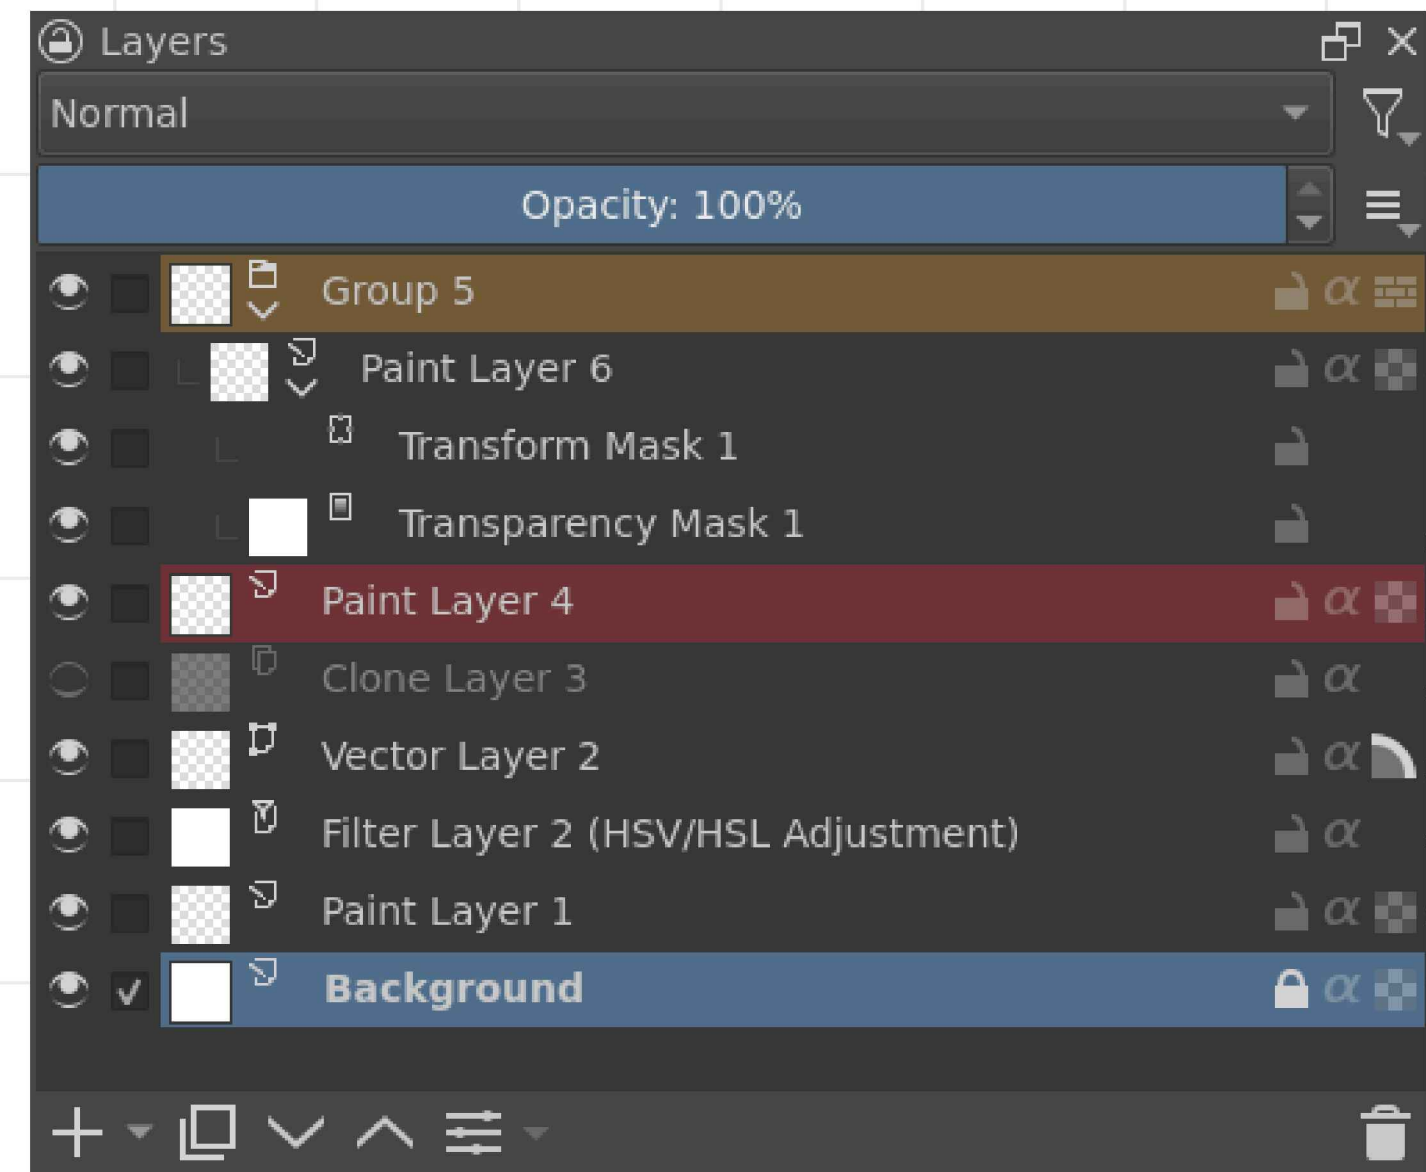

Aspectul tileset-ului depinde de
perspectiva jocului.

Recomand top-down Stardew Valley-
like pentru incepatori.

KRITA #12

Va recomand sa **lucrati cu groups**, sa le denumiti corespunzator etc.

Pentru ca o sa aveti **foarte multe layers**, este foarte important sa ramaneti organizati.

KRITA #13

Fill tool

Palette Docker

Select Opaque

Transform Tool (Ctrl + T)

Tasta E (eraser toggle)

Quick Color Picker (Ctrl)

Blending Modes
